

# Microwave Tuner Control Systems

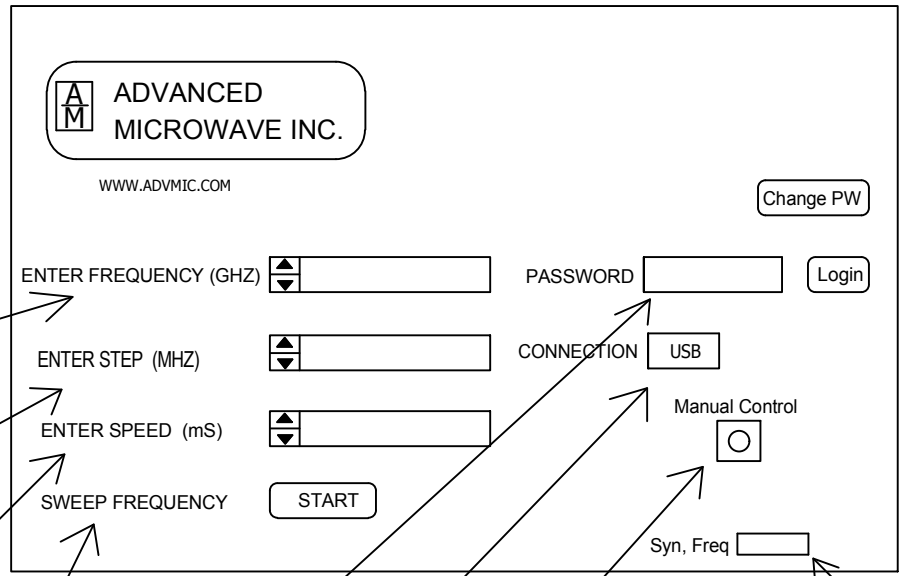

This system is easy to operate and is user friendly. Networking makes it possible to control the Tuner via USB 3.0 directly to any computer, which makes the system very secure.

To find the signal with out any other instrument, it is possible to scroll the frequency up (down) until you get maximum signal on the display.

The Tuner works with all computer Operating Systems.

No Ethernet connection is needed. However the computer can up/ or download the data by operator.

All Software & Hardware will be provided. ( Computer is not included)
